

Please join us for a new workshop:

Navigating Intellectual Property Rights in Biomedical Research

Tuesday November 3
2-3:30 pm
S123 BST

Get answers to questions such as:

- What legal obligations are attached to federal dollars, or resources purchased with federal dollars, that are used in research?
- How do third party patents and other intellectual property rights affect my research?
- What restrictions are placed on the use of commercially available reagents?
- Can a supplier of a research tool require me to list them as a co-author on publications?
- If I am going to publish my results, none of it will be patentable anyway, so why worry about the intellectual property clause?
- How do I meet my sponsor's expectations with regard to intellectual property?

Join representatives from the Office of Technology Management, the Office of Research, and the Office of General Counsel as they interactively present case studies and real life compliance scenarios that scientists face on a daily basis in research labs.

Registration is appreciated but not required
